

Francisco Pes De Mello.

Escreva os seguintes verbos na forma afirmativa da terceira pessoa do singular:

- a) read - reads
- b) repair - repairs
- c) watch - watches
- d) listen - listens
- e) love - loves
- f) have - has
- g) push - pushes
- h) do - does
- i) think - thinks
- J) kiss - kisses
- l) buy - buys
- m) go - goes

Assinale, no texto a seguir, todas as ocorrências de verbos na forma afirmativa do Simple Present, na terceira pessoa do singular:

What is Web Design? Web design is not simply cut and paste. It is a question of how to present your content. You do not design a good web page by using some buttons and putting them together with your content into the web. It is much more than that. It is about presenting your client's company on the web. You can possibly imagine that a lot of work is necessary for a page to attract many people. A professional look and a good structure require time. It is simply not possible to create them in just a few hours. First, you need to create the page structure and discuss it with your client. The structure is important. With a good structure, your visitors do not get lost somewhere on your site. Of course you need to have the content, but it is the structure that shows the way to that content. Second, and that is not easier, you need to lay up a design on this structure. The idea how to design a web page is very important. Most of the time is spent between layout and creation, because finding a good concept takes some time. Your client usually brings the content of the web page, which usually has to be adapted. After structure and design are ready, it is important to rework the material for the page. Text has to be formatted - this is not as simple as it seems. All text has to be equalized to the whole design and still needs to be readable in a decent way. So the web designer scans the images (if they are not already in digital format), reworks them (e.g. adjusts contrast, brightness, sharpness, size, cut special image parts in a qualitative way, etc) and transfers them to the page. Web design is all about creating a great web site. A skillful web designer is one that manages to create a web site that visitors want to return to over and over again.
